

Question:

What do all these people have in common?

- ☑ Anyone who ever used a needle ... even once.
- ☑ VietNam-era Veterans who were inoculated by the government.
- ☑ People with decade-old, or jailhouse tattoos.
- ☑ Hemophiliacs.
- ☑ People with home-made piercings.

Answer:

They are all in high-risk groups for having hepatitis C.

Often referred to as the sleeping dragon, Hepatitis C is a blood-borne virus that can be with you – without symptoms – for 20 years or more. It is estimated that about 5 million people have the disease in the U.S. Currently there's no sure cure for Hep C, but there are a couple of treatments currently on the market that give ya a 40% chance of clearing it. Research is currently underway to find a better, more tolerable treatment.

The straight up is, the sooner you know, the better your chances of clearing it.
